

Quality is more than a word

Air to Air Thermal Shock Chambers

TSA Series

3 YEAR WARRANTY

A Wide Variety of Fixed Test Area Type Thermal Shock Chambers

For achieving compliance with the ISO 26262 Road vehicles - Functional safety, IEC 61508 Functional Safety of Electrical/Electronic/Programmable Electronic Safety - related Systems rapid temperature change testing is required to increase the reliability of automotive components. TSA series is designed to evaluate reliability of test specimens by rapid change of the air temperatures from hot to cold repeatedly by opening and closing of damper in a single test area.

Thermal Shock Chambers P.3~P.20

3 YEAR WARRANTY

+ 300°C Specification P.6

12000L

Features

Compliant with IEC 60068-2-14 Na and MIL-STD-883L standard tests

Two-zone test

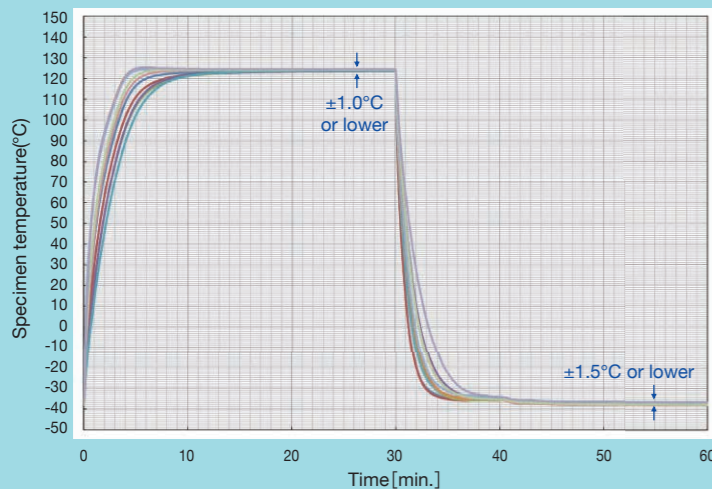

Three-zone test

Temperature uniformity

TSA-203ES-W measurement example

Test conditions
 High-temp. exposure: +125°C, 30 min. Specimen: Printed circuit boards
 Pre-heating temperature: +145°C Measuring points: 10
 Low-temp. exposure: -40°C, 30 min.
 Pre-cooling temperature: -55°C

2-zone and 3-zone switching by dampers

The TSA series evaluates the reliability of samples by applying short-term alternating stresses of high and low temperatures to them in compliance with standard tests.

◀ How it works

Thermal shock without moving test specimens

You can get accurate test results without any mechanical impact on test specimens because a test area does not move. Fixed test area type can save testing time because transfer time of the specimen from one chamber to the other is not necessary, also suitable for testing large size, heavy specimens and/or testing many small devices at one time.

Quick temperature recovery and uniform temperature distribution

Adjust the wind volume, wind speed, and wind direction from the blower using a wind direction board to effectively and uniformly distribute the air in the test area. It is possible to conduct more accurate and reliable tests with less variation in the time it takes for the sample to reach the set temperature under both low-temperature and high-temperature exposure conditions.

Features

1000 cycles continuous operation (option: defrost-free operation)

Minimizing defrosting burden with defrost-free operation (option: defrost-free operation)

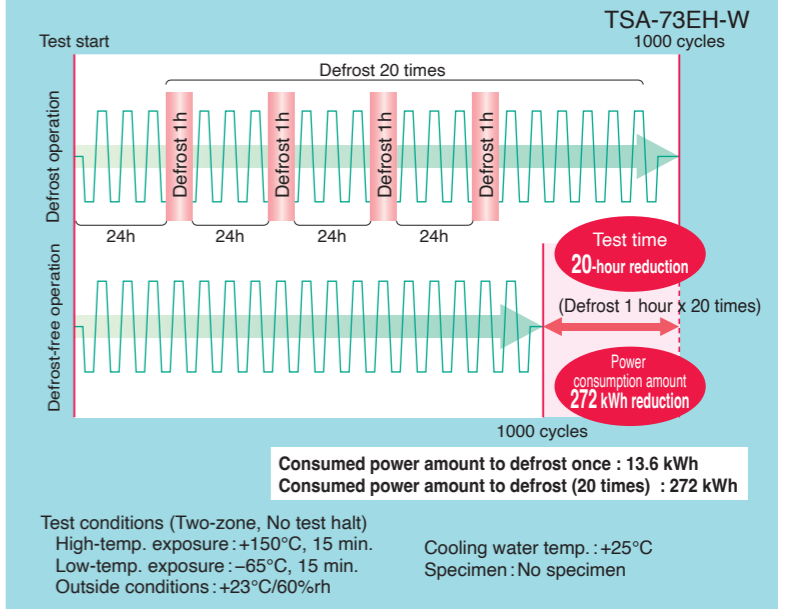

It is possible to run continuously for 500 hours without interrupting the test due to defrosting. It is possible to conduct 1000 consecutive tests under the 15-minute exposure condition without interruption, and reduce defrosting time and power consumption during cycle testing.

Automatic setting of pre-cooling and pre-heating in energy-saving, Eco operation mode [Patent JP 5204808]

This feature can further reduce power consumption and remove the inaccuracies and hassles caused by adjustments based on preliminary experiments. Tests operation achieves both energy savings and reproducibility/reliability.

Parallel refrigerator control system for energy-saving control [Patent JP 5487167]

1000 cycles test time comparison example

Temperature changes under Eco operation (example)

TSA-73EH-W
 Max. 50% reduction in power consumption

*Compared to previous model TSA-71H-W

To minimize our chambers potential environmental impact

R-449A is the best alternative to R-404A

Features

You can get accurate test results with fixed test area type that eliminates vibration stress

Product temperature control (example)

Vertically sliding door

Automatic door (option)

Conductor Resistance Evaluation System AMR with TSA

● Easy access to specimens

A standard equipped $\phi 50$ mm cable port is capable of cables with terminal connectors and plugs can be easily connected to specimen. An optional flat cable port is available.

◀ Easy access from the side

● Space-saving sliding door

Equipped with a manual vertical sliding door activated by the unlock button. The sliding door maximizes limited space without being concerned with the door opening and closing space. As an option, the door can be automatically opened/closed at the touch of a button for ease of operations even when carrying specimens.

◀ Video for automatic door

● System integration with ESPEC evaluation system

The ESPEC Conductor Resistance Evaluation System AMR (Sold separately) and TSA series are interlocked as evaluation system.

The system continuously measures the micro resistance in solder joints and the conductive resistance of connectors during thermal cycle test.

● International standards

The TSA series meets the following global safety standards:

- ISO 12100 (Safety of machinery)
 - IEC 60204-1 (Low voltage)
 - IEC 61000-6-2 and EN55011(EMC)
 - RoHS directive
 - Pressure Equipment Directive (PED)*
- *220/400/415V power supply models classified in PED category II

Special Specifications

Please contact us or our local partners for more information.

Easy wiring for measurement and supply power

● Large cable port

Size: W65xH125mm

Easily feed $\phi 50$ connectors and connectors that cannot be fed through flat cable ports.

● Door notch port

The new door notch port allows specimens to be mounted in the test area while connected to power.

Remote cooling modification

Condenser for high temp. chamber changes to remote cooling system which is placed outdoors.

*1 The test results may not meet specifications depending on the quantity of specimens or the setting method.
*2 Some models do not conform to the standard depending on test conditions. For further information, please contact ESPEC.
*3 Applicable when equipped with the ambient-temperature exposure option.

Network

* Requires an intranet

Chambers can be operated from PC and Mobile Device

● **Remote monitoring and control (Ethernet connection)**

The chambers are equipped with unique web applications that enable chamber status to be confirmed and operated from a web browser screen (PC or mobile device). It is also possible to start operations with a PC or other device from a remote location.

● **Editing programs with a browser**

It is possible to edit the program patterns registered in the testing chamber with a web browser.

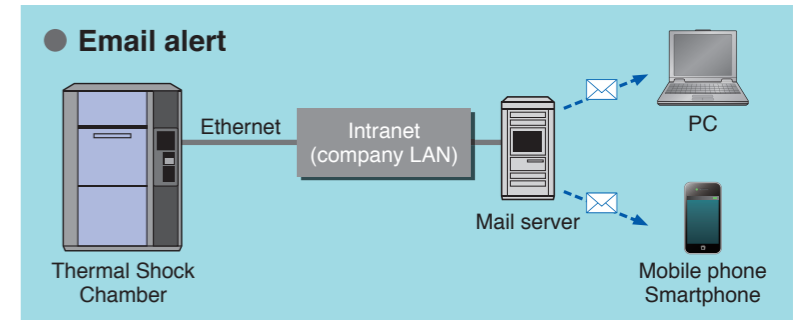

Remote monitoring and control

● **Email alert**

When an alarm is triggered, an e-mail is sent to the registered PC or mobile device's e-mail address. A notification can also be sent at the time of test completion. Set the recipient e-mail address from the Maintenance setting screen.

*Requires an intranet environment capable of sending e-mails.

ESPEC OnlineCore (Sold separately)

Central control system recommended for multiple environmental test chambers installations

Making Operations More User-friendly

Setting	40 patterns(9999 cycles/pattern)
Exposure time setting	High temp. exposure/Low temp. exposure 99 hours and 59 min. (1min. unit) Ambient temp. exposure 99 hours and 59 min. (1min. unit)
Language	The language can be changed with the screen settings (Japanese / English / Chinese (simplified / traditional) / Korean).

Color LCD touch panel

Wide 9-inch screen with LED backlight is clearer and provides faster display speed. Quick access can be set to have instant access to any page you often need, either registered test program start, on else.

Test data records

Temperature setting and measurement values can be recorded on the internal memory and external memories.

Test pause scheduling [Patent JP 5456600]

It is possible to program tests to pause after the end of cycle on exposure, or removing specimens from the test area during test.

Keep your test chamber in top condition and protect you from unexpected expenses!

Maintenance monitor

Check the equipment on the monitor screen

You can check the pressure of the refrigeration system and the temperature of the cooling water on the screen or PC connected to the network.

Preventive maintenance

Type	Alarm	Date and Time
WAR	REFRIG (LOW STAGE) PRESSURE LOW WARNING	2020-03-17 13:38:07
WAR	REFRIG COOLING WATER TEMP WARNING	2020-03-17 13:39:06
WAR	REFRIG WATER-COOLED CONDENSER TEMP WARNING	2020-03-17 13:39:42

For preventive maintenance

Maintenance warning function notifies the signs of refrigeration system failures before the chamber stops.

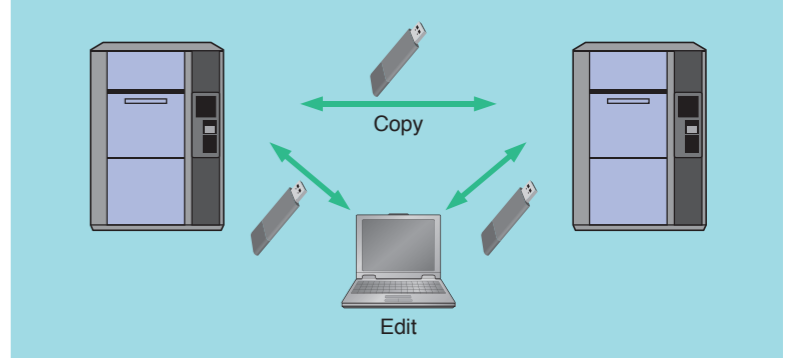

Copy of test program patterns

Transfer test programs between chambers without the need of a PC, via USB stick.
* The USB memory is not included.

Trend graph output on USB memory

Trend graphs can be displayed on the web application or downloaded on a USB memory. It is also possible to continuously register data on the USB memory if numerous data records are needed.

Program copy and computer editing

USB memory port

Download edit programs online

Via the Pattern Manager Lite software installed on your PC, edit programs according to your testing needs, and upload them with a USB.

The Pattern Manager Lite software allows you to edit programs for your chamber, view and edit data as graph, etc. The software can be downloaded from the Test Navi website.

Test Navi

(<https://www.test-navi.com/eng/index.html>)

This website provides practical knowledge on environmental testing that ESPEC has acquired through years of experience, as well as covering everything from the fundamentals to the latest information on environmental and reliability testing.

FITTINGS

ACCESSORIES

- Specimen basket (18-8 Cr-Ni stainless steel/5 mesh metal basket)
TSA-43
(W230 x H40 x D356 mm/load capacity up to 2.5 kg) 2
- TSA-73
(W400 x H40 x D356 mm/load capacity up to 5 kg) 2
- TSA-103
(W640 x H40 x D356 mm/load capacity up to 5 kg) 2
- TSA-203
(W640 x H40 x D656 mm/load capacity up to 17 kg) 2
- TSA-303
(W960 x H40 x D656 mm/load capacity up to 17 kg) 2

- Shelf brackets
(shelf attachment pitch 60 mm, adjustable in 7 levels) 2 sets
- Breaker handle stopper 1
- Cartridge fuse
5A (200V AC specification) 2
10A (220/380/400/415V AC specification) 1
- Cable port rubber plug 1
- Nipple (water-cooled specification only) 1
- Strainer (water-cooled specification only) 1
- Strainer element (water-cooled specification only) 1
- Gasket 1
- Operation manual 1
- Warranty card 1

Power cable is not included.

SAFETY DEVICES

- Leakage breaker (200, 220V AC specifications)
- Circuit breaker (380, 400/415V AC specifications)
- Electrical compartment door switch
- Test area door switch
- Hot chamber overheat protection switch
- Cold chamber overheat protection switch
- Hot chamber overheat protector (controller)
- Cold chamber overheat protector (controller)
- Circuit breaker for air circulator
- Refrigerator high/low pressure switches
- Compressor built-in protector (except TSA-43EL)
- Compressor temperature switch
- Thermal relay for compressor (TSA-43EL only)
- Water suspension relay (water-cooled specification only)
- Air circulator thermal relay
- Motor reverse prevention relay
- Air pressure switch
- Fuse
- Cooling tower interlock terminal (water-cooled specification only)
- Compressor circuit breaker
- Heater circuit breaker
- Test area overheat protector (controller)
- Test area overcool protector (controller)
- Overheat protector/overcool protector
- Air purge valve
- Specimen power supply control terminal

Options

UTILITY

Power cable

- 5 m
- 10 m
- * The chamber does not come with a power cable.

Plug socket

- To supply power to external equipment
- 2 plug sockets
 - Rated capacity 100V AC 3A
(Total capacity)

Built-in air compressor

This option is useful in case sufficient external primary air supply cannot be secured.
Air is required to air cylinders that drive dampers and the test area door.

Casters

- Installed for mobility.
- 6 casters (4 for TSA-43EL)
 - 4 leveling feet

TEST SAMPLE SETTING

Automatic door

Automatic sliding door (vertical) operated by single-touch button. Equipped with 2 safety mechanisms: a photoelectric sensor, and a touch sensor. A door stop switch is also set.

Door open/close switch

Additional cable port

Provided in addition / replacement of the standard cable port (left side)

- $\phi 50$ mm round
- Flat cable port (25 x 100 mm slot)

$\phi 50$ mm

Flat cable port

Cable port rubber plug

Prevents air leakage from the cable port.

- $\phi 50$ mm for round port
- For flat cables
- Spiral-wrapped plug(2m)

$\phi 50$ mm for round port

For flat cables

Spiral-wrapped plug

Specimen basket/shelf brackets

Equivalent to standard accessory.

- Material: stainless steel (5 mesh)

Heavy-duty shelf

Use to hold heavy specimens exceeding the load capacity of the standard specimen basket.

- Load capacity: 30 kg

NETWORK

I/O interface

Communication ports to connect the chamber to a PC.

- RS-485
- RS-232C
- GPIB

Communication cable

- RS-485 5 m/10 m/30 m
- GPIB 2 m/4 m

Options

EASY OPERATION

Defrost-free operation

1000 cycles test time comparison example

Consumed power amount to defrost once : 13.6 kWh
Consumed power amount to defrost (20 times) : 272 kWh

Test conditions (Two-zone, No test halt)
High-temp. exposure : +150°C, 15 min. Cooling water temp. : +25°C
Low-temp. exposure : -65°C, 15 min. Specimen : No specimen
Outside conditions : +23°C/60%rh

For two-zone tests, enables continuous tests without requiring defrosting for up to 500 hours max. ESPEC has developed a unique structure that prevents the penetration of outside air and uses recirculated air during testing to stop frosting on the low-temperature side. This enables continuous tests up to 500 hours, so around 20 defrost cycles during this period can be eliminated. This option can reduce both the test time in the amount of the defrosting time (approx. 60 minutes each time) and the power consumption required for defrosting (13.6 kWh each time).

* The TSA-43EL-A, 73EL-A, 73ES-A and 103EL-A have a 300-mm protrusion on the top.

Model	TSA-43EL	TSA-73EL, ES	TSA-103EL, ES	TSA-203EL, ES	TSA-303EL	TSA-73EH
Number of cycles	Maximum 500 cycles (Or maximum 500 hours)					Maximum 1000 cycles (Or maximum 500 hours)
High-temp. exposure/time	+125°C/30 min.					+150°C/15 min.
Low-temp. exposure/time	-40°C/30 min.					-65°C/15 min.
Outside conditions	+23°C/60%rh or less					
Cooling water temp.	+25°C					
Power supply voltage	Rated voltage					
Sensor position	Upstream					Downstream
Specimen	1.5 kg Plastic molded ICs 1.0 kg Specimen basket/shelf brackets 0.5 kg	5.0 kg Plastic molded ICs 3.5 kg Specimen basket/shelf brackets 1.5 kg	6.0 kg Plastic molded ICs 3.5 kg Specimen basket/shelf brackets 2.5 kg	10.0 kg Plastic molded ICs 7 kg Specimen basket/shelf brackets 3 kg	10.5 kg Plastic molded ICs 7 kg Specimen basket/shelf brackets 3.5 kg	5.0 kg Plastic molded ICs 3.5 kg Specimen basket/shelf brackets 1.5 kg
Temp. recovery time	Within 15 min.	Within 5 min.			Within 10 min.	Within 5 min.

Ambient-temperature exposure (EL type only)

Enables three-zone tests by adding a damper mechanism and an air circulator.
· High temp. exposure range: +60 to +200°C

Options

EASY OPERATION

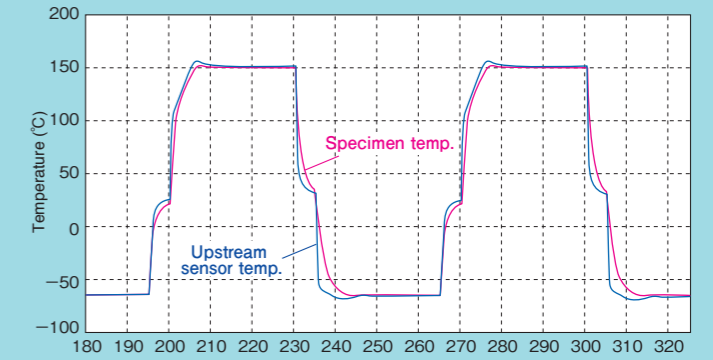

Product temperature control

A sensor is attached to the product to control the chamber based on the product temperature. The product temperature reaches and maintains the temperature setting as fast and accurately as possible. (Cannot be combined with Eco operation mode.)

- Number of measuring points: 1
- Location: Chamber front, left-side panel
- Accessory: Thermocouple type T (copper, copper-nickel) x1*
- * 2 when simultaneously equipped with a recorder

Measurement example TSA-73ES-A

Test conditions
High temp. exposure +150°C 30 min. Specimen Plastic molded ICs (3.5 kg)
Ambient temp. exposure 5 min. Specimen baskets 2nd and 6th level from top
Low temp. exposure -65°C 30 min. Control points 28-pin QFP (quad flat package) with sensor installed at center of 6th level

Product temperature monitor with trigger function

Two sensors are attached to the specimen and the temperature of the specimen displayed on the instrumentation is monitored. The option has a trigger function that switches to the exposure test after the specimen temperatures reach the temperature setting, so even more precise tests can be run. It can also record the temperatures of the specimen and the test area when connected to a temperature recorder.

- Number of measuring points: 2
- Location: Chamber front, left-side panel
- Accessory: Thermocouple type T (copper, copper-nickel) x2*
- * 4 when simultaneously equipped with a recorder

Measurement example

Options

LOGGING

Paperless recorder

Records the temperature of each section such as the temperature inside the chamber.

Display: 5.7 inch color touch panel

Inputs: 6 channels

Temperature range: -100 to +220°C

Internal recording media:

Flash memory 8MB

External memory

CF memory card port

(Includes a 256 MB CF card)

USB memory port

Chart recorder

RK-61 1 pen

RK-63 3 pens

RK-64 6 dots

Temperature range: -100 to +220°C

Effective recording chart width 100 mm

Recorder wiring

Preparation of a power cable, temperature sensor, and conductor grounding wire for additional installation in the future.

Recorder terminal

Used to output the temperature Within test area, hot chamber, and cold chamber.

Thermocouple

Attached to specimen to measure specimen temperature.

Thermocouple with a brass ball tip

Thermocouple type T (Copper/ Copper-Nickel)

· 2 m

· 4 m

· 6 m

Expose signal output terminal

A signal is output via a contact switch when test area temperature is Within the user-selected range. This signal can be used to control peripheral instruments, like applying a voltage to specimens only during high temperature exposure, or monitoring test operation from a remote point.

Power meter

Accumulates the amount of power the chamber uses.

Applying DC power supply

Capable of applying voltage to the specimen, used for bias testing.

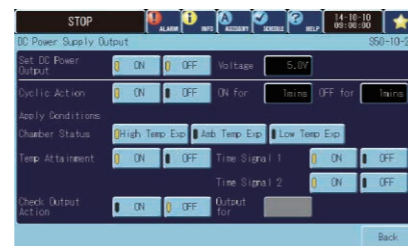

· 5V

· 12V

· 15V

· 24V

· 48V

Total cycle counter

Indicates cycle counts.

· With reset function

· Display range: 1 to 99999999

Options

SAFETY

Additional overheat protector

Additional preventive measure can be taken for excessive temperature rise in the chamber, in addition to the standard equipped overheat protector.

External alarm terminal

If the safety device of the chamber is activated, the external alarm terminal will notify it to a remote point.

Status indicator light

Select light color, lighting, and blinking or buzzer sound.

Pole length: 285mm

The length can be reduced by 10mm (up to 55mm) if so requested.

Height from the ceiling of the chamber when the pole length is 285mm.

· Level 1, 438 mm

· Level 2, 478 mm

· Level 3, 518 mm

· Level 4, 558 mm

Height from the ceiling of the chamber when the pole length is 80mm.

· 5 colors, 393 mm

*In case of 5 colors, the light color, lighting, blinking and buzzer sound patterns are fixed.

Level 3

Emergency stop pushbutton

Stops the chamber immediately.

With guard

With cover

Anchoring fixtures

Used to bolt the chamber to the floor.

Chamber dew tray

Prevents water leaks from the chamber onto the floor.

*The use of casters is recommended to facilitate operation.

*To prevent damage in the event of water leakage, other preventive measures are also available.

· Traceability certificate

Safety precautions

- Do not use specimens which are explosive or inflammable, or which contain such substances. To do so could be hazardous, as this may lead to fire or explosion.
- Do not place corrosive substances in the chamber. If corrosive substances are generated by the specimen, the life of the chamber may be significantly shortened specifically because of the corrosion of stainless steel and copper and because of the deterioration of resin and silicon.
- Do not place life forms or substances that exceed allowable heat generation.
- Be sure to read the operation manual before operation.

600L and larger capacities

Type	TSA-603EL-W	TSA-1100H-W	TSA-3300H-W	TSA-12000H-W	TSA-202D-W

Various Thermal Shock Chambers

In addition to the lineup of thermal shock chambers below, our products can be tailored to your application.

Elevator Type Air to Air Thermal Shock Chamber **TSD**

The two-zone thermal shock chambers have been developed to meet major International standards for thermal shock testing.

System	Two-zone transition by vertical transfer of specimens
Exposure	+205°C/-77°C
Capacity / Inside dimension (mm)	100L / W710 x H345 x D410

* Also compatible with 200-liter and larger capacities.

Elevator Type Air to Air Thermal Shock Chamber **TSE**

Meets standard tests for a temperature recovery time for 2-zone (+150°C, -65°C) up-stream air of 5 minutes or less. This air-cooled thermal shock chamber has a compact design but the same performance of large equipment.

System	Two-zone transition by vertical transfer of specimens
Exposure	+200°C/-65°C
Capacity / Specimen basket dimension (mm)	10.9L / W320 x H148 x D230

* 300°C spec. is also available.

Liquid to Liquid Thermal Shock Chamber **TSB**

The "liquid to liquid" thermal shock testing draw more and more attention for its ability to impose higher stress on specimens than the classic "air to air" thermal shock tests, but also for delivering quicker test results.

System	Two-liquid bath system with specimen basket transfer
Exposure	+200°C/-65°C
Capacity / Specimen basket dimension (mm)	2.1L / W150 x H150 x D200

* Also compatible with 4.5-, 10-, 15- 30-liter and larger capacities.
